

**AMENDMENTS TO THE CLAIMS:**

1. (Currently amended) A scintillator comprising:  
a Group III nitride compound semiconductor,  
wherein said scintillator is excited by radiation.
2. (Currently amended) A scintillator according to claim 1, wherein said Group III nitride compound semiconductor includes ~~has~~ a layer structure.
3. (Original) A scintillator according to claim 2, wherein a layer of said Group III nitride compound semiconductor is formed on a substrate.
4. (Original) A scintillator according to claim 3, wherein a buffer layer is formed between said substrate and said Group III nitride compound semiconductor layer.
5. (Currently amended) A scintillator according to claim 2, wherein said Group III nitride compound semiconductor layer includes ~~has~~ a hetero structure.
6. (Original) A scintillation counter including a scintillator according to claim 1.
7. (Original) A scintillation counter including a scintillator according to claim 2.
8. (Original) A scintillation counter including a scintillator according to claim 3.

9. (Original) A scintillation counter including a scintillator according to claim 4.
10. (Original) A scintillation counter including a scintillator according to claim 5.
11. (New) A scintillator according to claim 1, wherein said Group III nitride compound semiconductor comprises:  
  
a layer that emits fluorescent light when radiated by at least one of a CU-K $\alpha$ -ray source, an X-ray source, and a  $\gamma$ -ray source.
12. (New) A scintillator according to claim 1, wherein said Group III nitride compound semiconductor comprises:  
  
a layered structure including a plurality of alternating GaN layers and InGaN layers.
13. (New) A scintillation counter according to claim 6, wherein said scintillator counter comprises:  
  
a radiation source that irradiates at least a portion of said scintillator; and  
  
a light receiving unit that receives light emitted from said scintillator.
14. (New) A scintillation counter according to claim 13, wherein said radiation source includes at least one of a CU-K $\alpha$ -ray source, an X-ray source, and a  $\gamma$ -ray source.
15. (New) A scintillation counter according to claim 13, wherein said light receiving unit comprises:

a light amplifying and detecting unit.

16. (New) A scintillation counter according to claim 13, wherein said light receiving unit comprises:

a photomultiplier tube.

17. (New) A scintillation counter according to claim 13, further comprising:

a spectroscope disposed between said scintillator and said light receiving unit,

wherein said spectroscope prevents light of a predetermined wavelength from reaching the light receiving unit.
